

M0037:

Marine Environment Protection:

Understanding the Frameworks & Challenges

Training Description:

Professionals faced with marine environment protection come from different sectors and it is in their interest to understand the entire picture before setting the priorities proper to their field. This interactive course is designed so as to familiarize you with the most relevant aspects of a changing subject area that is difficult to fully grasp and place in a context of reference.

This intensive training course is designed for a cross professional group of learners, including shipping and the oil and gas industry. Structured around presentations, exercises and practical insights into the priorities of the marine environment protection agenda at present, it embraces current challenges on the international level as well as selected regional topics. Recent developments such as air pollution from shipping and areas of growing interest such as decommissioning of offshore platforms are also explored. All in all, this course will give you the chance to enrich and update your awareness in view of a more informed policy and decision making.

With this course, participants will gain a solid and current exposure to the frameworks and challenges relating to marine environment protection that will make you a better-informed professional.

The course will highpoint:

- The relevance of marine environment protection and related priorities
- The systems which aim at marine environment protection
- Marine environment protection and the shipping industry
- Marine environment protection and the oil and gas industry
- Accountability (legal persons, individuals, states, etc.)

Training Objectives:

By the end of the training, participants will be able to:

- ✓ Understand the impacts and demands of marine environment protection
- ✓ Analyse the existing frameworks governing marine environment protection
- ✓ Develop synergies with stakeholders from other sectors
- ✓ Identify current developments requiring actions
- ✓ Update their knowledge

Personal Impact:

- ✓ Enrich their critical thinking and analytical skills
- ✓ Boost their leadership in this area
- ✓ Integrate the knowledge acquired in order to develop technical skills on the field
- ✓ Enhance effective interaction with professionals in other sectors
- ✓ Give an impetus to their career

Organisational Impact:

- ✓ Strengthen critical thinking within the organisation in a critical area
- ✓ Identify possible areas of improvement and seek to achieve optimum performance
- ✓ Contribute to goal setting in the frame of business development
- ✓ Transmit knowledge within the organization
- ✓ Enhance effective interaction with external stakeholders involved with marine environment through a better understanding of marine environment protection

- ✓ Align the organisation with current trends and enhance public image
